

2011 Annual Growth Report

Harford County Government Department of Planning and Zoning

AMENDED DECEMBER 2012

David R. Craig
Harford County Executive
Preserving Harford's Past; Promoting Harford's Future

Mary F. Chance
Director of Administration

C. Pete Gutwald
Director of Planning and Zoning

This document is available in alternative format upon request.

AMENDMENT TO 2011 ANNUAL GROWTH REPORT

Background:

In accordance with the Harford County Adequate Public Facilities provisions (Section 267-126) of the Harford County Code, testing for adequate school capacities shall occur on June 1 and December 1 of each year. Amendments to the 2011 Annual Growth Report are required and include updated enrollment figures and projections based on September 30, 2012 enrollment figures. Based on the adequacy standards outlined below, the Annual Growth Report is amended to reflect current enrollments and projections as of September 30, 2012.

Adequacy Standards:

The adopted adequacy standards for the Harford County Public School system are 110 percent of the rated capacity within 3 years for both elementary and secondary schools. Included with this amendment to the 2011 Annual Growth Report are Tables 6, 7, and 8, the utilization charts for elementary, middle, and high schools. These tables identify current enrollment figures as of September 30, 2012, and include projections through the 2015/2016 school year. Preliminary plans for new subdivisions of greater than five lots cannot be approved in elementary or secondary school districts where full-time enrollment currently exceeds or is projected to exceed 110 % of the capacity within three years.

Elementary Schools:

Thirty-two of thirty-three elementary schools in Harford County currently meet established adequacy standards. Hickory Elementary School does not meet established adequacy standards. The projected enrollment and utilization rate for Hickory Elementary School for the 2015/2016 school year are 724 and 111%, respectively. Subdivisions of greater than five lots within this attendance area will not be approved, but will continue to be reviewed and placed on a waiting list beginning December 1, 2012, until capacity is available.

Secondary Schools:

All seventeen middle and high schools in Harford County currently meet adequacy standards.

The 2011 Annual Growth Report

EXECUTIVE SUMMARY

In accordance with the Harford County Adequate Public Facilities provisions (Section 267-126) of the Harford County Code, the Harford County Annual Growth Report must be updated annually to identify any facilities that are below the County's adopted minimum standards. This year's Annual Growth Report includes information and analysis regarding Public Schools, the Water and Sewerage System, and Road Intersections, and it addresses the requirements of the Smart Green and Growing legislative package adopted by the Maryland General Assembly in 2009.

This legislation requires local jurisdictions to provide an annual report on development activities and planning programs to ensure that these activities are being completed in a manner consistent with the visions established by the legislation. Every other year, since July 2010, local jurisdictions have been required to report on their Adequate Public Facilities ordinances and how these ordinances are influencing growth within the designated Priority Funding Areas.

Harford County Development Activity:

During calendar year 2011, Harford County approved 32 subdivisions, 27 of which were residential. The residential subdivisions resulted in the creation of 530 lots, of which 464 were located within the County's designated growth areas. This is consistent with the Land Use Element Plan's goal of directing 80% of all new growth to the Development Envelope.

There were a total of 1,808 building permits issued by Harford County in 2011, of which 682 were for new residential structures. The municipalities of Aberdeen, Bel Air, and Havre de Grace issued 134 new residential permits collectively. Approximately 91% of the new construction residential permits were issued for projects within the designated growth areas.

The Master Plan and Land Use Element Plan was adopted in early 2012.

Harford County Public Schools:

Effective July 1, 2012 the adopted adequacy standards for the Public School system are:

Elementary Schools - 110 percent of rated capacity within 3 years.

Secondary Schools - 110 percent of rated capacity within 3 years.

Based on these standards, preliminary plans for all subdivisions may be approved in all elementary and secondary school districts.

Harford County Water and Sewerage System:

Based on the Adequate Public Facilities Ordinance and the Harford County Water and Sewer Design Guidelines, preliminary plan approvals, public works utility agreements, and building permits in areas served by public water and sewer systems can be approved only where adequate capacity exists in the water and wastewater treatment facilities and in distribution and collection lines serving the area.

The County water system's average daily usage in 2011 was 12.1 MGD (Million Gallons Per Day), with a peak day demand of 15.5 MGD. The total maximum daily water treatment capacity is approximately 20.4 MGD. Per the Maryland Department of the Environment's Water Supply Capacity Management Plan, the County has a maximum day drought demand of 18.7 MGD, which leaves an excess capacity of 1.7 MGD for additional growth. Expansion of the existing Abingdon Water Treatment Plant is currently under construction and is anticipated to be completed by May 2012, bringing an additional 10 MGD of source capacity online.

The total average sewage flows, system capacity, and average reserve for the four service areas within Harford County are listed below.

Harford County 2011 Sewerage Capacity by Service Area in Million Gallons Per Day (MGD)			
Service Area	Total Flow	System Capacity	Average Reserve
Harford County-Sod Run	13.4	20.0	6.6
Joppatowne	0.90	0.95	0.05
Spring Meadows	0.01	0.01	0.00
Whiteford-Cardiff	0.037	0.12	0.083

The determination of water or sewerage capacity in a specific area of the County can be found in the "Water and Sewer 2011 Adequate Public Facilities Report" with appropriate guidance from the Department of Public Works. A determination of adequacy is made prior to preliminary plan approval, site plan approval, public works utility agreement execution, and building permit approval.

The water system is evaluated for adequacy for providing flows during the maximum day demand, while maintaining system pressures required to deliver fire flows. Water booster stations and/or transmission lines, service mains, storage tanks, and water treatment plants are evaluated. Areas within the Harford County Development Envelope that exist at the highest elevations of the water pressure zones are evaluated for adequacy on a case-by-case analysis. The anticipated growth within the County is accommodated through a combination of developer funded projects and the County Capital Improvement Program.

The sewerage system is evaluated to accommodate expected peak flows through collectors, interceptors, pump stations, force mains, and wastewater treatment plants. Should a problem exist in a collector sewer, it is the developer's responsibility to resolve

the inadequacy. Inadequacies at major pumping stations and wastewater treatment plants are resolved by programmed capital projects or by projects cooperatively supported by a group of developers.

Harford County Road System:

To determine existing service levels at intersections and the impact of additional traffic, a Traffic Impact Analysis (TIA) must be submitted for developments that generate 249 trips per day at the time of preliminary/site plan review. Proposed developments located within the Chesapeake Science and Security Corridor will not be required to submit a Traffic Impact Analysis unless the proposed use will generate 1,500 trips per day at the time of preliminary/site plan review.

The adequacy standards for road intersections within the study area are based on the property's location within or outside the Development Envelope and are defined as follows:

Inside the Development Envelope: Level of Service (LOS) D.

If existing LOS is E or F at an intersection within the Development Envelope, then the developer must mitigate the development's new trips.

Outside the Development Envelope: Level of Service (LOS) C.

If the existing LOS is D or lower, then the developer must mitigate the development's new trips.

A developer is required to provide improvements at intersections within the study area where trips generated by the development lower the LOS below the adopted standards. These improvements must bring the LOS to the adopted standard. If the TIA determines that the existing level of service does not meet the adopted standards, then the subdivider must mitigate the impact of the trips generated from the development site. The study area is defined for areas within and outside the development envelope as:

Inside the Development Envelope: The TIA study area shall include all the existing County and State roads from point of entrance of site to the second intersection of an arterial roadway or higher functional classification road, in all directions. Developments which generate 1,500 or more trips per day may be required to expand the study area.

Outside the Development Envelope: The TIA study area shall include all existing County and State roads from point of entrance to first intersection of a major collector or higher functional classification road, in all directions.

The determination of existing and projected Levels of Service is calculated in the Traffic Impact Analysis, which is performed by the developer and reviewed by the Departments of Planning and Zoning and Public Works.

In addition to the review of individual Traffic Impact Analyses, the Departments of Planning and Zoning and Public Works have studied a number of major roads and intersections to identify existing conditions. This list of roads represents a cross section of key intersections located inside, outside, and on the fringes of the Development Envelope.

There are three signalized intersections and ten unsignalized intersections with one or more movements operating at a LOS E (or D outside Development Envelope) or lower during peak hours. The evaluation of the LOS is determined by performance of the intersection during one hour peak traffic periods in the a.m. and/or p.m. The following intersections contain one or more movements that operate at an unacceptable LOS:

1. Maryland 24 and US 1
2. Maryland 152 and Singer Road
3. Maryland 22 and Thomas Run Road / Schucks Road
4. Business US 1 and Henderson Road
5. Maryland 147 and Connolly Road
6. Maryland 23 and Grafton Shop Road
7. Tollgate Road and MacPhail Road
8. US 1 and Reckord Road
9. Maryland 7 and Brass Mill Road
10. Maryland 7 and Joppa Farm Road
11. Maryland 155 and Earlton Road
12. Maryland 543 and Henderson Road
13. Maryland 22 and Aldino-Stepney Road

Developments that impact these intersections will be required to mitigate their impacts to the intersection.

INTRODUCTION

In 2009, the Maryland General Assembly enacted the Smart, Green, and Growing legislative package. This legislation was designed to protect Maryland's environment and natural resources and to promote sustainable growth. As a result of Senate Bill 280 and House Bill 295, Harford County is required to submit an annual report to the Maryland Department of Planning. This report must provide information on development activity and planning programs to ensure that these activities are being completed in a manner consistent with the State's Smart, Green, and Growing goals and visions. The aforementioned bills require that reporting be based on designated Priority Funding Areas (See Appendix A).

Starting in July 2010, Harford County was required to submit a report to the Maryland Department of Planning on its Adequate Public Facilities Ordinances (APFOs) and any development restrictions within Priority Funding Areas that are the result of these ordinances. This report must be submitted by July 1st and then every two years thereafter; however, Harford County includes this information annually. As a result of these regulations Harford County's Annual Growth Report has been expanded to include the Smart, Green, and Growing requirements.

The 2011 Annual Growth Report is an ongoing analysis of growth trends, facility capacity, and service performance. The report also contains information on updates to the County's Development Regulations and updates of all planning documents as required by the State. It addresses State requirements regarding planning consistency and opportunities for improving the planning process.

This report is prepared by the Department of Planning and Zoning in coordination with the Department of Public Works - Water and Sewer and Engineering Divisions and the Board of Education. This report provides information on the present development activity as well as past trends and future projections for Harford County and the region.

The information in this report will be used by public officials, citizens, and private developers for various purposes:

- to assess facility adequacy during the development review and approval process;
- to assess facility capacity in regard to zoning reclassification decisions;
- to support the evaluation of priority projects in the annual Capital Budget review; and
- to identify critical deficiencies which require prompt attention by the County.

GROWTH TRENDS

Population Projection Methodology

Yearly estimates of population and households in Harford County for the Annual Growth Report are determined from the 2010 Census. This data is adjusted to reflect a number of variables including building permits, average household size, and household vacancy rates. The five and ten year projections are based on these estimates, with a growth factor applied to determine the rate and quantity of growth in the County. This growth factor is based on the number of building permits anticipated to be issued each year. It is important to note that projections are based on past trends and land availability. The population projections for the five other jurisdictions in the Baltimore Region are based on an interpolation of the Baltimore Metropolitan Council's Round 7C population forecast.

The population/household projections are compared to the Residential Vacant Land Inventory and reallocated based on the availability of residential capacity. A component of the residential land inventory is the number of net planned units remaining. The total planned units remaining is calculated by subtracting the total new residential building permits issued from the total preliminary plan approved units. Subdivision plans with six or more units remaining and approved municipality plans are included. There are 7,763 planned units remaining as of December 31, 2011.

The 2010 Census information at the census block level is utilized for specific analysis of each facility regarding area maps and demographic information. Building permits are identified by facility areas and by subdivision name and/or address for each year. This provides the needed information on growth trends by facility service area.

Regional Data

In accordance with the Harford County Adequate Public Facilities provisions of the Harford County Code, the annual growth report must include data on growth that has occurred during the previous year. Tables 1- 5 address the requirements specified in §267-126 A. (2).

Harford County Development Activity

As required by §3.09 of Article 66B, enacted by Senate Bill 280 and House Bill 295 (2009), Harford County is also required to prepare an annual report on development activity and planning programs as a means of ensuring consistency with the State's Smart, Green, and Growing goals and visions. The Bills require that reporting be based on designated Priority Funding Areas.

New Subdivisions

In 2011, Harford County approved 32 subdivisions, of which 27 were for residential plans and 5 were for non-residential plans, involving a total of 696 acres. The residential subdivisions resulted in the creation of 530 lots involving approximately 557 acres (See Appendix A). While 7 of the subdivisions occurred within the County's designated Priority Funding Area, they yielded 464 lots or 87% of the new lots approved. This percentage is consistent with the 2012 Land Use Element Plan's intent of directing at least 80% of all new growth to designated growth areas. The data reflects no changes in development patterns.

The remaining 20 residential subdivisions, located outside of the designated growth area, created 66 lots. Of these, 70% were two lots or less (12 single-lot subdivisions and two two-lot subdivisions). For the non-residential plans, three of the five were located within the Priority Funding Area. A map of all the approved subdivisions is provided in Appendix A.

New Building Permits Issued

A total of 1,808 building permits were issued by Harford County in 2011 of which 548 were for new residential structures. This is up from 1,554 in 2010. This number includes residential, non-residential, and accessory structure permits. The municipalities of Aberdeen, Bel Air, and Havre de Grace issued 134 new residential permits collectively. Approximately 91% of the 682 new residential permits were located within the County's designated growth area. A total of 108 non-residential permits were also issued. Of these, the largest numbers of permits issued were for industrial (46) with 28 being for storage/warehousing, and 12 for modular/industrialized structures. The remaining non-residential permits were for a variety of commercial and industrial uses. The remaining 1,152 permits were issued for accessory structures such as sheds, swimming pools, garages and other miscellaneous uses. Harford County maintains a monthly data report for building permits.

Development Capacity

The Department of Planning and Zoning has updated the inventory of residentially zoned land in the Development Envelope. This inventory provides a total residential land capacity and includes vacant undeveloped land, preliminary plan approvals, vacant land capacity in the municipalities, and potential redevelopment/infill capacity. Based on this update, there is an estimated capacity of 22,153 units in the development envelope.

Zoning Map Amendments

For 2011, there are no zoning map amendments to report.

PLANNING DOCUMENT UPDATES

This section addresses State reporting requirements regarding Code amendments and new or updated comprehensive plans and plan elements. During 2011, Harford County enacted seven amendments to its Development Regulations, which were comprehensively revised in 2008. Harford County continued work on updating the Master Plan and Land Use Element. The County also initiated the update of the Land Preservation, Parks and Recreation Plan (LPPRP) and the Bicycle and Pedestrian Master Plan. Details are provided below.

Zoning Code Amendments

Seven bills were enacted in 2011 that resulted in changes to the County's Development Regulations. Five of the bills resulted in amendments to the Zoning Code, and the other two amended the Subdivision Regulations. A list of the amendments is provided in Appendix B. One of the bills (Bill 11-04AA) was adopted in May 2011 and addressed housekeeping items, corrections, and clarifications. Bill 11-05AA, also adopted in May 2011, resulted in changes to the Critical Area Legislation. Bill 11-03 added fortune telling as a permitted use in B2 and B3 zoning districts. Bill 11-32 added the definition of transient dwelling and clarified the definition of lodging house. Bill 11-44 added Dembytown Church to the historic landmarks section. The County's Subdivision Regulations were amended by Bills 11-06 and 11-13. Bill 11-06 updated the Critical Area Overlay District concurrent with Bill 11-05AA, and makes revisions pertaining to Preliminary and Site Plans to provide for compliance with State-mandated changes as provided by the Critical Area Commission. Bill 11-13 provides a one-time one-year extension to site plans if APF is met.

Comprehensive Plan and Element Plan Updates

The 2012 Master Plan and Land Use Element Plan update was initiated in 2011. The public participation process provided opportunities for interested parties to express their ideas through a series of public meetings and workshops to address issues regarding the 2012 Land Use Element Plan. Utilizing a combination of meetings and technology based communication options, citizens were able to participate and follow the plan development process. The 2012 Master Plan and Land Use Plan Element was adopted on March 20, 2012 and incorporated the requirements of the Smart, Green, and Growing legislative package adopted in 2009 by the Maryland General Assembly.

The Kick-off Meeting for the update of the 2012 Land Preservation, Parks and Recreation Plan (LPPRP) was held in August 2011, with adoption anticipated by the summer of 2012. In addition, the Harford County Bicycle and Pedestrian Master Plan development was initiated in 2011, with adoption anticipated by early 2013.

The Water and Sewer Master Plan was updated in the spring and fall as required.

ADEQUATE PUBLIC FACILITIES

The County's Annual Growth Report must be updated annually to identify any facilities that are below the County's adopted minimum standards. This year's Annual Growth Report includes information and analysis regarding Public Schools, the Water and Sewerage System, and Road Intersections.

This report also addresses State reporting requirements for Adequate Public Facilities Ordinances (APFO) including reporting requirements for roads, transportation facilities and schools as they relate to development patterns. Since July 1, 2010, local jurisdictions have been required to submit an APFO report to the Maryland Department of Planning with future reports being due every two years thereafter. In the report, Harford County must identify any restrictions that occur within a Priority Funding Area as a result of APFO restrictions, and the report must address how the restrictions will be resolved.

Public Schools

To assess current and future adequacy of the public school facilities, the capacities of existing schools, school utilization and future populations are analyzed. The data in this report regarding the public school system are aggregated by the elementary/middle/high school districts, and include school enrollments, County-rated capacities for each school facility, utilization of each school facility, and three-year projected school enrollments (See Tables 6, 7, and 8). Modified school enrollment projections are included and take into account planned units remaining and projected units from vacant residential zoned land (See Tables 9 and 10). In addition, development information such as building permits issued by dwelling type (See Tables 11, 12, and 13) and population and household estimates (See Tables 14, 15, and 16) are included in this report. School maps and pupil yield factors by dwelling unit type are included in Appendix C and D, respectively.

Analysis

Each school facility has been analyzed in terms of past growth trends, current conditions, and future enrollment projections. The information is based on factual data and is aggregated by current school districts. Based on the Adequate Public Facilities provision of the County Code (Section 267-126), the level of service standard for Public Schools are:

- Elementary – 110 percent of rated capacity within 3 years
- Secondary – 110 percent of rated capacity within 3 years

Elementary Schools

Under current law, preliminary plans for subdivisions of greater than five lots cannot be approved in elementary school districts where the full-time enrollment currently exceeds, or is projected to exceed, 110 percent of the capacity within three years. Currently, all 33 elementary schools meet adequacy standards.

Secondary Schools

Under current law, preliminary plans for subdivisions of greater than five lots cannot be approved in secondary school districts where the full-time enrollment currently exceeds, or is projected to exceed, 110 percent of the capacity within three years. Currently, all 17 middle and high schools meet adequacy standards.

School Enrollment Projection Methodology

The methodology for projecting students utilizes historical data for live births and the number of children enrolled in public schools. Using these data, a series of ratios that reflect grade cohort survival are developed. These ratios include consideration of a number of factors:

1. Births in a given year which affect subsequent kindergarten and first grade enrollments.
2. Net migration of school age children.
3. Net transfer of children between public and private schools.
4. Non-promotion of children to the next grade level.
5. Dropouts in the later years of secondary school.
6. Shifts between regular grade and upgraded groups other than special education.

This technique of establishing a ratio is used for each successive grade. For example, a ratio is developed between the number of children actually in first grade in 2000 and the number in second grade the following year. The ratio, therefore, represents the number of first graders who advance to second grade. If significant variations exist (such as a rapid increase in home building), then factors such as pupil yields for subdivision activity and development trends must be measured.

In order to ensure accurate projections, development monitoring is a key activity because housing expansion periods have a direct impact on school enrollments. A primary means of calculating projected student enrollment due to a housing expansion period is by using pupil yield factors for new developments.

Pupil yield factors are determined by researching the number of students from a particular community/subdivision who are actually attending their home school. By dividing the number of students accounted for by the number of dwelling units, a pupil

generation factor is determined. It is important to note that different pupil yield factors are generated depending on housing type (single family, townhouse, apartment, etc.) and school level (elementary, middle, and high). Surveys of sample subdivisions to assess an accurate yield factor are completed on a regular basis. (See Appendix D)

Modified School Enrollment Methodology

Utilizing our regional cooperative forecast methodology, a projection of housing units was determined for each school district. It is imperative to note that these projections are constrained by Countywide estimates. The number and type of units were based on the existing zoning. After the number and type of units were determined and projected by year, a pupil yield factor was applied to determine the total number of new pupils by school district.

The methodology for determining a growth factor included a multi-step process. The process included utilization of the existing grade cohort succession methodology and the pupil yield factor. A factor was applied to the existing grade cohort succession ratio per school if the pupil yield factor identified an increase in the average number of students. In order to maintain a consistent application, all calculations were based on the Harford County Public School system's definition of "unadjusted" enrollment projections. No assumptions were made in terms of school capacities or utilization of existing facilities.

Water and Sewerage

The data included in this section for the water and sewerage system are aggregated by the water and sewer service area, which essentially reflects the Development Envelope as defined in the 2004 Harford County Land Use Element Plan. Additional information is included in this report on water/sewage usage by dwelling type for non-residential uses, an inventory of existing water consumption/sewage flows, demand projections (including the basis for their computation), and a list of capital projects is contained in the County's Capital Improvements Program for expanding facilities, including project status (See Tables 17-20). This information is extracted from the "2011 Water and Sewer Adequate Public Facilities Report," and is consistent with the County's Water Resources Element Plan.

Water and Sewer Facility Projection Methodology

Water:

The Harford County water service area is divided into four pressure zones because of varying topography within the Development Envelope. To provide an adequate supply of water, the transmission lines, and pumping and storage facilities for all zones must be sized for estimated future demands. In 1997, the average daily water demand by customers served by the County's central system was approximately 9.6 MGD, with a corresponding maximum day demand of approximately 14.3 MGD. In 2011, the County's average day and maximum day demands were 12.1 MGD and 15.5 MGD, respectively. The total maximum daily water treatment capacity is approximately 20.4 MGD.

Per the Maryland Department of the Environment's Water Supply Capacity Management Plan, the County has a maximum day drought demand of 18.7 MGD, leaving an excess capacity of 1.7 MGD for additional growth. To keep pace with the projected growth, staged construction programs are established that distribute required capital costs for improvements and/or additions to the County's system over a period of years.

Expansion of the existing Abingdon Water Treatment Plant is currently under construction and is anticipated to be completed by May 2012, bringing an additional 10 MGD of source capacity online. The County's total maximum daily water treatment capacity will increase to 30.4 MGD upon completion of the Abingdon Water Treatment Plant expansion.

There are 13 community water systems that are not maintained or operated by Harford County, but are subject to the APF provision of the County Code. These private systems, which are monitored and evaluated by the Maryland Department of the Environment, are as follows:

- 1) Maryland-American Water Co.
- 2) Campus Hills Water Works Inc.
- 3) Clear View Court Mobile Home Park
- 4) Darlington
- 5) Darlington Mobile Estates
- 6) Fountain Green Mobile Home Park
- 7) Greenridge Utilities Inc.
- 8) Hart Heritage
- 9) Lakeside Vista
- 10) Queens Castle Mobile Home Park
- 11) R & R Estates Mobile Home Park
- 12) Swan Harbor Mobile Home Park
- 13) Williams Mobile Home Park

Sewerage:

The sewage flows to Harford County's existing Sod Run and Joppatowne Wastewater Treatment Plants (WWTP) originate from a portion of the Development Envelope. The area between the municipalities of Aberdeen and Havre de Grace, as well as the cities themselves, are within the Development Envelope and are served by the municipal sewerage facilities. A complete "Sewer System Capacity Analysis" is included in the "2011 Water and Sewer Adequate Public Facilities Report."

The average daily influent flow to the Sod Run WWTP in 2011 was approximately 13.4 MGD, exclusive of recycle flows and septage. The average daily influent flow to the Joppatowne WWTP in 2011 was approximately 0.90 MGD. The average daily influent flow for Spring Meadows in 2011 was 0.01 MGD. The determination of future wastewater flows to wastewater treatment plants is made by using population and household projections developed by the Harford County Department of Planning and Zoning for the years 2000 through 2025. The projections were distributed by transportation analysis zones (TAZs) by aggregating the ultimate development in terms of equivalent dwelling units into sewerage drainage areas. In order to keep pace with projected growth, the expansion of the Sod Run Wastewater Treatment Plant from 12 MGD in 1995 to 20 MGD was completed in 2000. A sanitary sewer collection system has also been established in Whiteford-Cardiff, which serves the properties within an established sanitary subdistrict. This system was made operational in 2001 with 172 mandatory hook-ups completed in 2002. Treatment for this subdistrict is provided by Delta Borough, Pennsylvania, with a current permitted average flow of 0.12 MGD.

In addition to the major publicly owned wastewater treatment plants, there are multiple private wastewater treatment systems, including mobile home parks and other commercial/community establishments, plus a larger population on private individual septic systems outside the Development Envelope. In addition, many of the schools outside the public sewerage service area are on publicly owned multi-use wastewater treatment systems. Since 1972, the County has prohibited any additional privately

owned community or multi-use treatment plants with a peak capacity larger than 10,000 gallons per day (GPD) outside the Development Envelope. This encourages growth to remain within the growth corridor, maintains financial stability, and protects the environment.

The Division of Water and Sewer has identified sewage pumping stations that do not have any additional reserve capacity and that may impact future development in the vicinity of these pumping stations. These pumping stations include:

- Brentwood Park Sewage Pumping Station (S.P.S.)
- Cedarwood S.P.S.
- Dembytowne/Hanson Road Petition S.P.S. (3)
- Farwind Farms S.P.S.
- Forest Greens S.P.S.
- Greenridge S.P.S.
- Harford Square S.P.S.
- Haverhill Road S.P.S.
- Parliament Ridge S.P.S.
- Perry Avenue S.P.S.
- Singer Woods S.P.S.
- West Baker Avenue S.P.S.
- Woodland Hills S.P.S.

The non-inclusive listings of the sewage pumping stations above have no available capacity. This listing does not preclude the possibility of finding adequate capacity in other sewage pumping stations should a development request approval for more flow capacity than that available, prior to any programmed improvements. It is imperative to note that mechanisms exist to cure such APF problem areas. Such remedies may include an upgrade to the pumping station by a development entity or by development of a recoupment\surcharge policy which specifies design, construction, and financial responsibilities.

In order to alleviate the capacity issues at the Cedarwood and Parliament Ridge Sewage Pumping Stations, the construction of a new regional pumping station, Bear Cabin Branch Pumping Station was bid for construction in 2010 and is planned to be completed in 2012. The sewer system in Fallston is sized to service the development potential within the original sanitary subdistrict established in the County Code. In 2010, an evaluation of existing capacity was completed and reported that there was a small amount of reserve capacity available. In March 2011, the County Council expanded the subdistrict to include three additional parcels of land. Any further expansion of the existing sanitary subdistrict would require a re-evaluation of the capacity of the Fallston sewer system and County Council approval.

There is a sanitary sewer within the Bynum Ridge subdivision that does not have adequate capacity as defined by the APF Ordinance. This has the potential to affect

development in the Bynum Run Collector Sewer drainage area north of Bynum Ridge Road. The Division of Water and Sewer is currently studying the sewers to determine the best method of eliminating the capacity issue. It is possible that this capacity issue could be resolved by a development entity or by development of a recoupment/
surcharge policy which specifies design, construction, and financial responsibilities.

Table 17
JANUARY - DECEMBER 2011
WATER CONSUMPTION & SEWAGE GENERATIONS

This table reflects the total number of water and sewer customers and the water consumption and sewage generations for residential and commercial/industrial users.

	2011
Total Number of Connections	43,106
WATER	
Total Number of Connections	39,987
Average Water Production	12.1 MGD
Maximum Day Water Production	15.5 MGD

6712	Edgewood Interceptor Parallel	Funding Phase
6713	Greenridge Pump Station Replacement	Design Phase
6715	Bill Bass Outfall Sewer Replacement	Design Phase

Road System

The information for the APF Road System contained in this section includes the following: signalized and unsignalized intersection capacity analysis results - existing conditions (Tables 21 and 22), average daily count locations (Table 23), a list of approved County capital projects funded for construction in FY 12 (Table 24), and a list of State Consolidated Transportation Program (CTP) projects funded for construction in FY 12 (Table 25). This information will help identify existing deficiencies in the road system and guide both County and State capital project funding to the most critical road projects.

The intent of the APF Roads provisions of the County Code is to create a mechanism that requires proposed development to make appropriate and reasonable road improvements, based on the proposed development's impact to the road.

Road Intersection Analysis Methodology

A key feature of the APF Road Intersection regulations is the requirement for preparation of a Traffic Impact Analysis (TIA) for residential and non-residential uses that generate more than 249 trips per day. Proposed development located within the Chesapeake Science and Security Corridor will not be required to submit a Traffic Impact Analysis unless the proposed use will generate 1,500 trips per day at the time of preliminary/site plan review. The TIA provides information regarding the impact of generated trips from proposed land uses on traffic safety and traffic operation within a designated area, and recommends solutions to mitigate the impact. The method of conducting a Traffic Impact Analysis is outlined in the "Harford County Traffic Impact Analysis Guidelines."

A complete TIA includes the following:

- The designation of the study area as required in the APF regulations based on whether the proposed development is inside or outside the Development Envelope.

Inside the Development Envelope:

The TIA shall include all the existing County and State roads from the point of entrance of site to the second intersection of an arterial roadway or higher functional classification road, in all directions. Developments which generate 1,500 or more trips per day may be required to expand the study area.

Outside the Development Envelope:

The TIA shall include all existing County and State roads from point of entrance to the first intersection of a major collector or higher classification road, in all directions.

- An analysis of existing conditions including traffic counts, lane configuration, and signal timings.
- An analysis of background conditions without site development, including growth in background traffic, future traffic generated by nearby proposed developments and the determination of Levels of Service with any approved/funded State and County Capital projects.
- An analysis of the projected conditions with site development, including the traffic being generated by the proposed development and background traffic.
- An explanation of the results with recommended improvements as necessary.

The developer is required to provide improvements where the trips generated by the development reduce the Level of Service (LOS) from adequate to a LOS below the standard. The standard for intersections within the Development Envelope will be LOS D. If existing LOS is E or F at an intersection within the Development Envelope, then the developer must mitigate the impact of the development's new trips. The standard for intersections outside the Development Envelope will be LOS C. If the existing LOS is D or lower, then the developer must mitigate the impact of the development's new trips.

In addition to the review of individual Traffic Impact Analyses, the Departments of Planning and Zoning and Public Works have studied a number of major roads and intersections to identify existing conditions. This list represents a cross section of key intersections located inside, outside, and on the fringes of the Development Envelope. There are three signalized intersections and ten unsignalized intersections with one or more movements operating at a LOS E (LOS D outside the Development Envelope) or lower during peak hours. The evaluation of the LOS is determined by performance of the intersection during one hour peak traffic periods in the a.m. and/or p.m. The following intersections contain one or more movements that operate at an unacceptable LOS:

1. Maryland 24 and US 1
2. Maryland 152 and Singer Road
3. Maryland 22 and Thomas Run Road / Schucks Road
4. Business US 1 and Henderson Road
5. Maryland 147 and Connolly Road
6. Maryland 23 and Grafton Shop Road
7. Tollgate Road and MacPhail Road
8. US 1 and Reckord Road
9. Maryland 7 and Brass Mill Road
10. Maryland 7 and Joppa Farm Road
11. Maryland 155 and Earlton Road
12. Maryland 543 and Henderson Road
13. Maryland 22 and Aldino-Stepney Road

Developments that impact these intersections will be required to mitigate their impacts to the intersection. The Interstate-95 / MD 24 Improvement Project construction was completed in October 2011 and has improved the LOS at the MD 24 / MD 924/Tollgate Road intersection and the Interstate 95 and MD 24 Ramp.

To address operational issues and impacts associated with BRAC, the Maryland State Highway Administration began construction on the US 40 and MD 715 interchange project in the fall of 2010. This project will add a spur to the eastbound US 40 ramp which will allow vehicles to access northbound MD 715 and eliminate the U-turn movement on US 40. The project will also add capacity to MD 715 at the Old Philadelphia intersection. The anticipated completion date for this project is 2013. Tables 24 and 25 detail County Capital Projects and State Consolidated Transportation Projects relative to this reporting period.

MD 462 – Paradise Road; MD 132 to over Carsin's Run	ADA Improvements
MD 763 – Superior Street; East of Ohio Street to Juniata Street	ADA Improvements
Edgewood MARC Train Station	Replacement of Existing Train Station & Site Enhancements

PLANNING CONSISTENCY REVIEW

Maryland's Smart, Green, and Growing regulations require that local jurisdictions, as part of their annual report, must determine if all of the changes in development patterns reported are consistent with each other, the recommendations from the last annual report, the adopted plans of the jurisdiction and adjoining jurisdictions, and the plans of the State and local jurisdictions that are responsible for financing or constructing public improvements that are necessary for the implementation of local plans. To address this requirement the following is provided:

All of the development noted in this report has been determined to be consistent with the surrounding land uses. A review for consistency is part of the plan approval process. As recommended in previous reports, the County continues to direct the majority of its new development and redevelopment (91% in 2011) to the designated growth areas.

Preservation efforts were continued through a variety of State and local programs. While participation in agricultural preservation programs is available to all property owners with agriculturally zoned land, the County's primary focus remains on protecting the Priority Preservation Area (PPA). During 2011, 351 acres were protected, all of which were in the PPA. This brings the total protected land in the County to 45,672 acres, including over 33,000 acres in the Priority Preservation Area.

The subdivisions noted in Appendix A are consistent with the intent and policies of the recently adopted 2012 Land Use Element Plan, the Water and Sewer Master Plan, and the Adequate Public Facilities regulations. All roadway improvements are consistent with the State Consolidated Transportation Plan, the Transportation Improvement Program, and the County's Transportation Element Plan.

In addition, all major subdivisions or development plans that must be reviewed by the County's Development Advisory Committee, along with requests for rezoning that are located within one mile of a local jurisdiction, are submitted to that jurisdiction for review and comment. All development activity approved during 2011 was consistent with the plans of adjoining jurisdictions. During 2011, the County participated in work sessions for development of the Aberdeen Transit Oriented Development (TOD) Plan. Coordination between the municipalities and the County will continue as the 2012 Land Use Element Plan is implemented.

PROCESS IMPROVEMENTS

As part of the annual report, local jurisdictions must identify any changes that will improve the planning and development process, and any zoning ordinances or regulations that have been adopted during the reporting period that specifically address the planning visions in §1.01 of Article 66B.

With the adoption of the 2012 Master Plan and Land Use Element Plan (adopted March 20, 2012), the remaining major program improvements to be addressed are the update of the 2005 Land Preservation, Parks, and Recreation Plan (LPPRP) and the development of the Harford County Bicycle and Pedestrian Master Plan. The kick-off meeting for the update of the 2012 LPPRP was held in August 2011. The adoption of the 2012 LPPRP is anticipated by the summer of 2012. The Harford County Bicycle and Pedestrian Master Plan was initiated in 2011 with adoption anticipated by early 2013.

In 2011, work also began on the Harford County Phase II Watershed Implementation Plan (WIP) for the Chesapeake Bay TMDL (Total Maximum Daily Load). Harford County's approach to address the development of the Phase II WIP was to establish a Core Team of County, municipal, State and federal staff with expertise in the various nutrient source sectors identified by the US Environmental Protection Agency. The Core Team met on a monthly basis to discuss current capacity, strategies to meet the nutrient load allocations, and two-year milestones. Core Team meetings will continue as the County develops its Phase II WIP by July 2, 2012. The County continues to focus its effort and resources into the Bay TMDL and Watershed Implementation Plan process. This process is evolving, and the County will continue to work to address water quality improvements in the coming years.

The County does not anticipate making any changes to the development review process in the immediate future, and will continue to direct the majority of development and redevelopment to designated growth areas.

ORDINANCES AND/OR REGULATIONS THAT IMPLEMENT THE STATE PLANNING VISIONS

As noted previously in the 2010 Annual Growth Report, the Department of Planning and Zoning has updated several of its element plans (Master Plan and Land Use Element Plan, Natural Resources and Water Resources Element Plan, Transportation Element Plan and Historic Element Plan). Each of these plans include the planning visions contained in §1.01 of Article 66B, and strategies that address these visions. The County has also completed the update of its Chesapeake Bay Critical Area Program. The planning visions will also be incorporated into the Harford County Land Preservation, Parks, and Recreation Plan update as well as Bicycle and Pedestrian Master Plan, which are currently being developed.

DEVELOPMENT REGULATIONS – LIST OF AMENDMENTS

Zoning Code

Effective	Bill	Description
5/23/11	11-04AA	Housekeeping items / corrections / clarifications: 267-4 Definitions of high and mid-rise apartments; 267-40 Forest and Tree Conservation - remove fee-in-lieu statement; 267-53 AG - clarify private well setback exception; 267-62 NRD - clarify foot and walking trails and add wording to road and driveway crossings regarding stormwater drainage. Clarify panhandle portion of lots in section G; 267-74 GMA clarify location and density; 267-76 Mixed Use - clarify districts and densities; 267-88 Special Exception, Specific Standards - high rise densities and TCU FAA reference correction; 267-126 APF - remove 4 and 5 year enrollment statement.
5/23/11	11-05AA	Critical Area Legislation including 267-4 Definitions and 267-63 - Major re-written section incorporating "lot coverage".
5/23/11	11-03	Add fortune telling as "P" in B2 and B3 (permitted use chart change)
12/12/11	11-32	267-4 Add definition of dwelling, transient and modify definition of lodging house
12/19/11	11-44	267-112 Add Dembytown Church to historic landmarks section.

Subdivision Regulations

Effective	Bill	Description
5/23/11	11-06	268-10 and 268-19 - Chesapeake Bay Critical Area Overlay District and Preliminary and Site Plans - concurrent with 11-05AA Zoning Code Amendment.
6/27/11	11-13	268-19C(12) - Provide a one-time one-year extension to site plans if APF is met.

APPENDIX C

APPENDIX D

PUPIL YIELD FACTORS

To calculate pupil yield factors forty-eight subdivisions were selected from various geographic locations throughout Harford County, to include single family dwellings, townhouse units, apartments/condominium units, and mobile home units. The subdivisions selected represented newly constructed and established subdivisions ranging in size from 22 units to 2,240 units. Additionally, subdivisions were selected to provide a broad range of attendance areas across the County. A count was made of each student who resided in each of the forty-eight subdivisions studied. The data were tabulated by unit type, and the specific pupil yields were calculated for each subdivision in the elementary, middle, and high schools.

UNIT TYPE	GRADES		
	K-5	6-8	9-12
Single Family	.28	.15	.19
Townhome	.25	.12	.14
Apartments (2 Bdrms)	.04	.01	.02
Condo (2+ Bdrms)	.04	.01	.02
Mobile Home	.16	.07	.06
