

WEED CONTROL GENERAL INFORMATION

Thistles, Johnsongrass, Shattercane, Palmer Amaranth, and Tall Waterhemp have been declared noxious weeds that adversely affect or threaten agricultural production in Maryland.

Regulations require that these weeds be controlled by anyone owning or managing land within the State.

Seeds from these noxious and other invasive weeds are transported by wind, water and humans. Weeds threaten the productive land of farmers and cause unsightly and unwanted problems in lawns and gardens of homeowners.

General control practices include mowing, cultivation and/or treatment with an approved herbicide.

Rev. 7/2023

HARFORD COUNTY

Robert G. Cassilly, County Executive
