Harford Streams Summer Adventure 2024

Watershed Protection and Restoration continued our “Harford Streams Summer Adventure” program for 2024, to raise awareness and support for protecting Harford County’s waterways and to encourage residents to explore the natural beauty of the County’s streams. Registered participants were invited to take selfies and write a short comment about something they did, learned, or observed at designated stream locations and upload them using an online survey.

This year, 478 adventurers qualified for a free T-shirt, and 30 furry friends qualified for a bandana.

Those who visited at least 11 locations qualified for a drawing to win their choice of a live animal encounter and campfire with smores for 12 at Eden Mill Nature Center OR a family membership to Ladew Gardens. The Elliott family of Bel Air were the winners, and they chose the family membership to Ladew Gardens as their prize.

The grand prize drawing choices were a 3-night stay at serene camping with creek views OR a kayak trip for 12 at Anita C. Leight Estuary Center for visitors who visited at least 15 locations. The winner was the Alvira family, also from Bel Air, and they chose the 3-night stay at serene camping with creek views.

Website

A web page was created at bit.ly/HSSummerAdventure for the program which included links for:

- Online Survey for uploading photos
- Interactive Dashboard for viewing photos
- Interactive Web Map for viewing locations
- Frequently Asked Questions
- Comments/Questions
- Drawing prizes

Apps

An online [survey](#) was created for uploading photos, entering locations and describing actions.

An online dashboard was created for [viewing photos](#).

An online web map was created for [viewing locations](#).

Advertising

Flyers, palm cards, or banners were distributed to numerous locations throughout the county or displayed on or through their social media. Locations included Harford County Libraries, Harford County Public Schools, various Harford County Government Organizations or Agencies, and various businesses.

On May 24, 2024, Harford County issued a Press Release laying out the details of the Summer Adventure program

Picture Yourself in Harford Streams Summer Adventure: Visit Harford Streams, Send in Selfies, Win Prizes

BEL AIR, Md., (May 24, 2024) - This summer, explore the natural beauty of Harford County streams, take selfies at your favorite locations, and win prizes in the Harford Streams Summer Adventure. This award-winning program from the Harford County Department of Public Works' Office of Watershed Protection and Restoration raises awareness and support for protecting natural resources by encouraging visitors to scenic local waterways.

County residents and non-residents of all ages along with your furry friends are welcome to join in the program which runs from Memorial Day through Labor Day.

"Some of my fondest childhood memories are of time spent on Harford's waterways, like canoeing Deer Creek," County Executive Bob Cassilly said. "I encourage participation in the 2024 Harford Streams Summer Adventure to raise awareness of the need to protect Harford's many treasured waterways for generations to come."

No registration, simply choose places to visit from the list of Harford stream locations or pick one of your own. Use the Harford Streams' online app to send in selfies from seven different locations to earn a free Harford Streams Summer Adventure T-shirt. Participating furry friends will receive a dog bandanna. New this year, visit all 20 locations plus 5 of your own to receive a bonus prize.

Visit 11 locations for a chance to win your choice of a live animal encounter and campfire with smores for 12 at Eden Mill NatureCenter or a family membership to Ladew Gardens. Visit 15 locations for a chance to win a 3 night stay at serene camping with creek views or a kayak trip for 12 at Anita C. Leight Estuary Center.

Visit the county website today at bit.ly/HSSummerAdventure or scan the QR code to view/ download a complete list of Harford stream locations with helpful information and an interactive map, then start uploading selfies with a stream in the background to earn your T-shirt/ bandana, bonus prize, and to qualify for a chance at larger prizes.

Share your adventures on social media using the hashtag #HarfordStreams and follow the fun on Facebook at Harford Streams.

Free T-shirt and dog bandana for Harford Streams Summer Adventure participants who visit seven different stream locations provided with up to 5 of your own.

Harford Streams Summer Adventure 2024 Prize Winners Announced

BEL AIR, Md. (Sept. 26, 2024) - The ninth annual Harford Streams Summer Adventure had another successful year with 478 adventurers qualifying for a free T-shirt and 30 furry friends qualifying for a bandana. The popular initiative helps to raise awareness and support for protecting Harford County's natural waterways.

Developed by Harford County government's Watershed Protection and Restoration Office, this award-winning program encourages citizens of all ages to take selfies at various locations and write a brief comment about their experiences to earn T-shirts and be eligible for other prizes. An online survey allowed participants to easily upload photos and submit their comments.

This year's grand prize drawing choices for participants who visited at least 15 locations were a three-night stay at serene camping with creek views or a kayak trip for 12 at Anita C. Leight Estuary Center. The grand prize winner was the Alvira family from Bel Air, who chose the three-night stay at serene camping with creek views.

Those who visited at least 11 locations qualified for a drawing to win their choice of a live animal encounter and campfire with smores for 12 at Eden Mill Nature Center or a family membership to Ladew Gardens. This year's winners were the Elliott family of Bel Air who chose the family membership to Ladew Gardens as their prize.

“I would like to congratulate this year’s prize winners and extend thanks to the hundreds of participants who ventured out to explore the many outdoor places throughout our beautiful county,” County Executive Bob Cassilly said. “This program continues to help build support for protecting Harford County’s treasured waterways.”

Photo caption: Harford County Executive Bob Cassilly, center, and Laura Coste from the Harford County Watershed Protection & Restoration Office, left center, congratulate this year's Harford Streams Summer Adventure prize winners. <p>🐝 Many native flowers, and about 30% of U.S. crops, rely on native bees like the sweat bee for pollination! 🐝 Sweat bees are some of the only bees that can buzz-pollinate! 🐝 Many flowering plants require buzz pollination to release pollen for reproduction, which means that insects like the sweat bee are critical for their survival. 🐝 With all of their unique traits and behaviors, sweat bees play a critical role in the health of the Chesapeake Bay watershed! Ever heard of the Bloodroot plant? 🌸 Native to the Chesapeake Bay watershed, this plant blooms from March to April 🌸 Inside of the bloodroot is a reddish-orange sap that indigenous communities in eastern North America have used as a natural dye for clothing and baskets, as well as face paint! 🌸 As a native plant, bloodroot is often preferred by local pollinators and has deeper roots soaking up more runoff, which keeps our waterways clean! Harford County Government	8/21/2024 9:00	Links	91	91

<p>🚢 Did you know that sailors in the 1600s detailed the challenges of navigating mountains of oyster reefs during Chesapeake Bay explorations?! 🚢</p> <p>🦪 It's true! Oysters used to flourish in abundance in Bay waters and they are the bedrock of the Chesapeake Bay! Oysters provide critical habitat for hundreds of species and have the miraculous ability to filter water and improve Bay health just by existing. Read this article to learn more about the benefits of Oyster restoration! 🦪</p> <p>Harford County Government</p>	10/10/2024 11:00	Links	60	60
<p>Happy Indigenous Peoples' Day! Let's recognize the contributions of the traditional owners of the Chesapeake Bay lands. November is Native American Heritage Month! This month, let's learn more about the Native American History in the Chesapeake Bay region: https://www.cbf.org/events/webinars/american-indian-tribes-of-virginia-and-the-chesapeake-bay.html?fbclid=IwY2xjawGVs2FleHRuA2FibQIxMAABHRRb9h7DG-aaNZq1KG9I882NDFLqs1SOlhZiq1CCtYYCw2Ev8tlwqNvsJA_aem_I8mrsqLP4cgMosriholzxw Harford County Government	11/7/2024 11:00	Photos	86	86
Have you ever spotted an Eastern whip-poor-will?  It is quite difficult considering this nocturnal bird spends its days sleeping on logs and branches near the forest floor and is perfectly camouflaged by its mottled brown and gray colors!  But by night, the bird comes alive! Right around dusk the bird's whip-poor-will call can be heard echoing across the forest!  When not singing, the whip-poor-will spends its night foraging for food. The bird eats insects only, especially flying insects like moths, beetles and mosquitoes! Harford County Government	11/12/2024 7:00	Links	39	39
 Check out these great ideas for recycling your pumpkins this year!  Harford County Government	11/14/2024 11:00	Photos	98	98

Mulch while you mow! Harford County Government	12/12/2024 11:00	Photos	106	106
Did you know that before being cut, real Christmas trees absorb air pollutants and remove carbon dioxide and emit fresh oxygen? These trees are important to water quality, stabilize soil and reduce erosion, reducing polluted runoff by filtering and absorbing pollutants that would otherwise flow into local rivers and streams!	12/17/2024 7:00	Links	92	92
Harford County Government				
Tomorrow is the winter solstice, when the path of the sun is the farthest south in the sky! Tomorrow the sun will travel its shortest path all year, making it the shortest day and longest night!	12/20/2024 11:00	Photos	114	114

<p>Let's remember the importance of these winter habitats for our native birds!</p>	1/15/2025 9:00	Photos	92	92
<p>🐸 Have you ever wondered what the difference is between frogs and toads? 🐸</p> <p>Maybe you've heard the saying "all toads are frogs, but not all frogs are toads"</p> <p>🐸 Skin Moisture - Frogs have thin skin and a layer of mucus making them feel slimy, while toads have dry, thick skin</p> <p>🐸 Toads are often found in dryer terrestrial habitats than frogs because their thicker skin helps to retain water</p> <p>While there are some differences, both amphibians are indicator species, which means that their health reflects their habitats' health!</p> <p>Harford County Government</p>	1/17/2025 11:00	Links	68	68
<p>The Chesapeake has many diverse natural and historic sites!</p> <p>🕒 No matter the designation, there's plenty of places to get outside in watershed 🕒</p> <p>Check out this link to learn about the differences between National Parks, National Monuments, National Historic Sites, National Historical Parks, National Memorials, National Battlefields, National Trails, National Forests, National Marine Sanctuaries, and National Wildlife Refuges!</p> <p>Harford County Government</p>	1/21/2025 9:00	Links	67	67

<p>🐾 With the snow on the ground, now is a great time to look for wildlife tracks while enjoying the outdoors! 🐾</p> <p>Check out this guide that can help distinguish between the tracks of a:</p> <ul style="list-style-type: none"> 🐾 Red Fox 🐾 Raccoon 🐾 Opossum 🐾 Cottontail Rabbit 🐾 Beaver 🐾 Turkey <p>And more!</p> <p>Harford County Government</p>	1/23/2025 11:00	Links	89	89
<p>🐦 Have you heard of the Golden-winged warbler? 🐦</p> <p>🐦 This is a gray bird with vibrant yellow flashes</p> <p>🐦 It can be found in the Chesapeake Bay region as it migrates between breeding grounds in the northern U.S. and overwintering grounds in Central and South America</p> <p>🐦 This species thrives in areas that have a mix of open ground, shrubs and young trees</p> <p>🐦 However, this type of habitat is frequently disrupted by development, logging and invasive plant species</p> <p>🐦 Because of threats, golden-winged warblers numbers have declined nearly 70% in the past 50 years!</p> <p>Across the country, conservationists are focused on preserving the golden-winged warbler's habitat! Learn more by reading this article!</p> <p>Harford County Government</p>	1/28/2025 9:00	Links	49	49

WSA Summary 2025

Program Background

Harford Streams Watershed Stewards Academy (WSA) is administered through a partnership between the Harford County Watershed Protection and Restoration Program, University of Maryland Sea Grant Extension, and Harford Community College. The WSA is a train-the-trainer program where steward candidates attend approximately 50 hours of classroom and hands-on-training (including over 12 hours spent in the field during field trips), install a class project, and complete a small-group or individual capstone project. By completing the course requirements, stewards become urban stormwater management resources for their communities, capable of providing accurate educational information as well as implementing small scale stormwater management and/or water quality projects.

The course is comprised of classroom training that covers: stormwater management history and regulations; soils; native plants and plant selection; stormwater site assessment and planning; small scale Best Management Practice (i.e. rain barrels, downspout disconnects, and rain gardens) implementation; BMP maintenance and maintenance plan development; grant and other funding resources; and social marketing. The course is taught by county staff, University of Maryland Sea Grant Extension Watershed Restoration Specialists, and local experts.

After completing the course and their capstone project, stewards are expected to complete 5 hours of continuing education and 15 hours of volunteer work by the end of the next year (i.e. stewards that completed the course in Spring 2018 had until December 31, 2019 to complete the required hours). Following the first year, stewards are expected to continue to engage in stormwater issues and volunteer in their community by completing a combination of 20 hours of continuing education and volunteer time to maintain their “Master Steward” designation.

Harford Streams Watershed Stewards Academy is the 5th WSA that the University of Maryland Sea Grant Extension has established with partners throughout Maryland. The program is based on a model developed by Anne Arundel Watershed Stewards Academy, which is an independent program that was established in 2009. Although Harford County’s program is newer, this training program has a history of success in other Maryland localities and regions.

The 2017-2018 Harford Watershed Stewards Academy successfully graduated nine stewards, who installed and have maintained one class project and completed 2 capstone projects. The 2019-2020 class successfully graduated seven stewards, although the completion of the course was delayed due to COVID-19. Their class project, a rain garden, was installed in fall 2021. The second class of stewards also completed 2 capstone projects, with one currently being finalized. The 2021-2022 class enrolled 9 steward candidates and has completed one of three capstone projects, with delays due to staffing disruptions and the COVID-19 pandemic. The 2024-2025 (fourth) class enrolled and graduated 11 Master Watershed Stewards, and seven Capstone projects are on track to be completed by the deadline of December 31, 2025. The program overall has trained 42 Master Watershed Stewards, 27 of whom remained active in fiscal year 2025.

2017 - 2018 Class Project & Capstone Project Summary

Class Project

This class project was installed on May 12, 2018 at Tollgate Park. The 32-square-foot rain garden treats runoff from an approximately 200-square-foot concession stand roof. The rain garden took approximately 6 hours to install. Since completing the initial project installation, the stewards have maintained the rain garden. As of October 30, 2020, the stewards have spent approximately 43 hours on garden maintenance.

Capstone Projects

- *Project 1: Floating Wetland Installation at Ladew Topiary Garden* - The design consisted of five 4.5' x 4' modular floating wetlands capable of holding 18 native plants that were placed in a former quarry pond. Stewards have spent 19 hours on project maintenance since its installation.
- *Project 2: Pollinator Garden in Havre de Grace* - The project, which took 14 hours to install between site prep and final planting, will treat 264 square feet of impervious surface from the roof as well as some sheet flow from the nearby street. Stewards have spent 31 hours on project maintenance to date.
- *Project 3: Harford County Weed Warriors* - The stewards partnered with Anita C. Leight Estuary Center and Eden Mill Nature Center to deliver educational information. The stewards spent approximately 10 volunteer hours on the project.

2019 - 2020 Class Project & Capstone Project Summary

The steward candidates participated in the class project site selection and project development. Two potential sites were visited and evaluated for BMP implementation. The site evaluation process included identifying impervious surfaces that could be better treated, measuring slopes, and looking for constraints such as existing infrastructure. While COVID-19 restrictions delayed implementation of this project until fall 2021, the stewards created an approximately 100-square-foot rain garden, treating 600 square feet of roof runoff from an adjacent pavilion at the Churchville Recreation Center. Two of the steward capstone projects have been completed with another conservation landscaping planned at Mariner Point Park in spring 2023.

Capstone Projects

- *Project 1: Conservation Landscaping at Churchville Rec Center* - One steward completed their capstone project in fall 2020. Fifteen native plants were added to an area in front of the new Churchville Rec center building in an area that experiences substantial runoff. Due to COVID-19 restrictions, the project was smaller than initially planned and was completed individually by the steward.
- *Project 2: Conservation Landscaping at Hickory Elementary School* - Another pair of stewards completed their capstone in spring 2021. A 100-square-foot garden was installed at Hickory Elementary School and 23 native plants were planted.
- *Project 3: Conservation Landscaping at Mariner Point Park* – In process. Permission has been granted by Mariner Point Park management to improve the welcome median strip plantings by removing overgrown and invasive vegetation and replacing these with native plants to support pollinators. Installation is planned for Spring 2024.

2021 - 2022 Class Project & Capstone Project Summary

Beginning in September 2021 with 9 steward candidates, the third WSA class installed a rain garden at Mariner Point Park for their class project. The rain garden is 80 square feet and treats runoff from 625 square feet of impervious surface. Additionally, the class planted 120 square feet of conservation

landscaping. In all, 59 native plants were planted in both the rain garden and conservation landscaping. All nine steward candidates as well as 11 volunteers participated in the installation of the garden.

Capstone Projects

- *Project 1: Floating Treatment Wetlands at Havre de Grace Lock House* - The design consisted of four 4.5' x 4' and two 4' diameter modular floating wetlands capable of holding a total of 106 native plants that were placed in the historic lock house (turning basin) pond. There were 15 stewards and volunteers on-hand for the capstone installation.
- *Project 2: Rain Barrels & Conservation Landscaping at Christ Church* – Phase 1: In June of 2024, the Harford County Watershed Protection and Restoration Office was able to support the construction of a stabilization wall at the base of the conservation landscape site at Christ Presbyterian Church, Rock Spring Parish in Forest Hill. The team of three Watershed Stewards successfully obtained a Community Engagement and Restoration Grant through the Chesapeake Bay Trust for \$5,000 to fund phases two and three of the project. The Stewards installed three rain barrels, removed invasive vegetation in the garden space and replaced those plants with native species. Approximately 150 plants were installed. This was completed in two main events, one organized around Earth Day in April 2025, and the second in the fall of 2025. The Earth Day event engaged the Church's congregation in an educational session about native plants and proper installation and maintenance of rain barrels.
- *Project 3: Conservation Landscaping at Bosely Conservancy* – The conservation landscape at Bosely Conservancy was installed on June 6, 2023, marking the completion of capstone projects for three Stewards from the 2021-22 class. Having initially purchased plant plugs in early spring, the Stewards engaged students in North Harford High School's Agriculture and Natural Resources magnet program to up-pot the plants and care for them until they were ready to be planted in June. Additionally, one student was mentored by the three Stewards to complete her Supervised Agriculture Experience requirement for the program, and she maintained the garden with their guidance throughout the summer into the fall.

2024 - 2025 Class Project & Capstone Project Summary

The fourth Harford Streams WSA Class installed a 112.5 square foot rain garden at the new Izaak Walton League (IWL) facility in Edgewood, which is the future headquarters of the Harford County IWL chapter, for their Class Project. The rain garden treats one quarter of the runoff from the "pole barn," which is 1,000 square feet of the 4,000 square foot building. 158 plants were installed by the class participants and the project was completed on March 29, 2025.

Capstone Projects

- *Project 1: HarCo Plog* – One Steward worked with a local running club to host a combination jogging and trash pickup event, "Plogging," along Harford County trails and roads near Palmer State Park. The event engaged 16 participants and the group removed four 30-gallon bags of trash.
- *Project 2: Pollinator Garden at Hickory Elementary* – Three Stewards worked with the administration at Hickory Elementary School in Bel Air to install an approximate 180 square-foot pollinator garden and conservation landscape. Over 45 plants were installed in the garden space by the school's second grade class.
- *Project 3: Stormdrain Stenciling* – One Steward created a manual on how to get permission for and carry out stormdrain stenciling on County roads to alert community members that the

drainage leads to the Chesapeake Bay. 10 storm drains were stenciled in the Laurel Valley neighborhood of Harford County.

- *Project 4: Deer Creek Buffer at Eden Mill Nature Center* – Two Stewards worked with the trail maintenance team at Eden Mill Nature Center to move a section of trail impacted by erosion along Deer Creek and expand the riparian buffer accordingly. 21 trees were planted in a 600-square foot area.
- *Project 5: (In process at the time of this report) Bynum Run Residential Education* – One Steward developed an informational workshop series for her community on landscaping practices to enhance watershed health on the stream running through the community, Bynum Run. She received community input on workshop topics through a Facebook Group survey and designed the educational workshops around the community preferences.
- *Project 6: (In process at the time of this report) Downtown Bel Air Gardens* – Two Stewards are working to update and develop educational signage for the pollinator garden beds and rain garden adjacent to the County office buildings at 212 South Bond Street in Bel Air. Applications to the Harford Land Trust/UMD Master Gardener Pollinator Garden Trail have also been submitted to include these gardens as stops on the Trail.
- *Project 7: (In process at the time of this report) Watershed Education for Boys & Girls Club* – One Steward has planned a watershed education lesson for the Boys and Girls Club of Harford County and is coordinating with the group's leadership to deliver the lesson in the fall or winter of 2025.

Ongoing and Other Activities

The Master Watershed Stewards of Harford County have continued ongoing activity through regular Quarterly Meetings which provide continuing education and training opportunities both internal and external, introduce Stewards to new and relevant resources and programs (e.g. how to contribute data to MyCoast Maryland), and provide a platform for camaraderie building among the group. Maintenance of existing class projects and capstone projects is monitored and managed through online sign up sheets and regular updates at Quarterly Meetings.

Attending public events to promote the work of the Watershed Protection and Restoration office continues to be a large part of the workload of the Harford Stewards. They work to engage and inform the public about the Harford Streams Summer Adventure program as well as the importance of healthy watersheds at public events such as the Harford Farm Fair and the Wade-In at the Anita C. Leight Estuary Center.

Future Activities

With the 2025 graduates and long-time engagement of prior WSA classes, the program has recently initiated the formation of two Steward-led committees. The committees provide leadership opportunities for Master Watershed Stewards and increase the capacity of the program to provide ongoing and up-to-date programming. The Education Committee is focusing on updating educational information provided at public events, updating promotional materials, and developing engaging activities for the broad audiences reached at these events. The Maintenance Committee is focusing on customizing inspection checklists for each of the four class projects (rain garden) installations to ensure proper function and managing the support for these inspections provided by the Master Watershed Stewards. Each of these Committees has had one meeting as of October 2025, and are planning activities for 2026.

Class of 2025 and Staff

NEXT WSA MEETING

Tuesday, November 18
6:00 – 8:00 PM
McFaul Activity Center - Room #5

Rain Garden Maintenance!

We still need someone to sign up for Tollgate and Mariner in November!

1. **Sign up below** for a spot at any rain garden you choose.
2. **Submit** your hours into the [WSA Reporting System](#).
3. **Upload** your photos and comments to [Current Stewards FB Group](#).

[Tollgate Rain Garden Maintenance Sign Up Link](#)

[Churchville Rain Garden Maintenance Sign Up Link](#)

[Mariner Rain Garden Maintenance Sign Up Link](#)

Want to share something? Contact [Laura Coste](#), to have it added to the bulletin!

Service Hours & Project Opportunities

♦ **WSA Committees** - You're welcome to join more than 1!

Education Committee

Danny Imwold and Deb Stewart are serving as co-chairs of the Education Committee. The committee recently held its first meeting and is actively planning future community outreach and educational initiatives. If you're interested in joining this committee, contact [Deb Stewart](#).

Maintenance Committee

George Wiggins and Katie Bagri are chairs for the maintenance committee. The committee held its first meeting and will be coordinating the ongoing maintenance of the four class projects. To join this committee, please contact [George Wiggins](#).

Continuing Education Opportunities

♦ A Sea Change – Free Environmental Film Screening

Join the HdG Green Team to watch and briefly discuss the documentary A Sea Change – “A life-long sportsman and retired educator, Sven Huseby considers himself a well-informed environmentalist. But he is caught by surprise when he reads about the effect of excess carbon dioxide on the ocean in Elizabeth Kolbert's New Yorker article, “The Darkening Sea.” Sven embarks on a mission to learn more, wrestling with the possibility that his five-year-old grandson Elias will inherit an ocean bereft of the fish which have meant so much to their family. Sven uncovers research on the world's acidifying seas and its dramatic implications for our culture and economy.”

When: Wednesday, November 5, 7 - 8:30pm

Where: 121 N. Union Avenue, Havre De Grace

FREE

♦ Mosquitoes: More than Monsters?

Ben Burgunder loves mosquitoes. Ironical, considering that his job involves killing them by the thousands to reduce the risk of West Nile virus! This presentation will cover the good, the bad, and the interesting when it comes to these pesky and deadly creatures. There will be time for all of the mosquito questions you are itching to ask! Ben will also share tips to reduce mosquito numbers around your home and prevent mosquito bites.

Originally from Baltimore County, Ben Burgunder works as a public health specialist in Pennsylvania, searching for and eliminating the mosquitoes that spread West Nile virus. He earned a Master of Science in Entomology at the University of Maryland, College Park. His research there focused on West Nile virus surveillance in Chicago, a viral hotspot. Ben is also passionate about insect photography and using iNaturalist to learn more about the natural world.

When: Thursday, November 6, 7 - 8pm

Virtual

FREE

♦ Address Stormwater in Your Backyard with Conservation Gardens

The landscape choices we make in our backyards and neighborhoods directly affect the health of our local waterways and the Chesapeake Bay. Learn how you can grow clean water in your backyard by creating conservation gardens!

These gardens, which feature beautiful native plants, also filter stormwater runoff, improve water drainage issues, and provide pollinator habitat. In this webinar, we will share examples of local homeowners, businesses, and faith-based organizations that have implemented conservation gardens with Gunpowder Valley Conservancy.

When: Thursday, November 6, 5:30 - 7pm

Virtual

FREE

Other Items of Interest

♦ Eden Mill Fall Fest

Join in on the second Saturday in November each year and enjoy the beauty of the park and all it has to offer. Witness pumpkins fly through the air as they are chucked from a trebuchet! Free admission along with lots of free activities. Visit the nature center, historic grist mill museum, and educational garden area, all while playing the Passport Scavenger Hunt.

Other activities include educational displays by local organizations; crafts with Eden Mill's Master Gardeners; tattoos; a gourd hunt; corn grinding; live animals: games and prizes.

When: Saturday, November 8, 11am-3pm

Where: 1617 Eden Mill Road, Pylesville

FREE - Bring some cash for our food trucks and pumpkin chunkin' activity, if you wish to buy a pumpkin to catapult through the air!

♦ 18th Century Brewing Workshop

An Immersive History Experience with Michael Carver. This in-person event will be held on the lawn behind the historic Lee Mansion. Lunch is included and will be prepared in our 1830's kitchen over a hearth fire. Learn the art of brewing as it was done centuries ago.

When: Saturday, November 8, 10am - 4pm

Where: 2807 Jerusalem Road, Kingsville

COST: \$81.88

♦ Fall time Dog Walk for Adults

Time to get you and your pup out to Eden Mill for fun in the fall! Please bring a friendly furry friend who will do well in a group setting with other dogs! Be prepared to walk on the trails through various terrain.

When: Saturday, November 15, 9:30 - 10:30am

Where: 1617 Eden Mill Road, Pylesville

FREE

Ages 18 and up

Pre-registration is required.

Registration ends November 14th at 4 pm.

♦ Small Business Saturday

On the Saturday after Thanksgiving, immerse yourself in the vibrant tapestry of our community. From quaint boutiques brimming with handcrafted treasures to cozy cafes serving up locally sourced delights, Harford County offers a shopping experience unlike any other. By choosing to support our independent shops and small businesses, you're not just finding one-of-a-kind gifts; you're investing in the dreams of your neighbors, fostering local job growth, and strengthening the very fabric of our community. Explore our historic Main Streets, uncover hidden gems, and experience the warm, personalized service that makes Harford County truly special. Make this Small Business Saturday a memorable adventure, where every purchase tells a story and every dollar stays local.

When: Saturday, November 29

Where: Harford County

Funding Opportunities

[Chesapeake Bay Trust - Community Engagement and Restoration Mini Grant](#)

Funds activities such as tree plantings, rain gardens, stream cleanups, and storm drain stenciling.

To see a longer list of potential projects, read the full Request for Proposals (RFP).

Please note the RFP is updated every year.

Deadline: Rolling basis. Requests are accepted on an on-going basis until funds are fully expended for the fiscal year
Up to \$5,000

[Chesapeake Bay Trust - Urban Trees Mini Grant](#)

Funds activities such as small tree planting projects in qualified urban underserved areas.

To determine eligibility view the orange areas in the [online map](#).

Deadline: Rolling basis. Requests are accepted on an on-going basis until funds are fully expended for the fiscal year

Up to \$10,000

Harford County Stormwater Pollution Prevention

MS4 ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

Sanitary Sewer System

The sanitary sewer system is comprised of a series of drains and pipes that lead from toilets, sinks, dishwaters, and washing machines in houses and businesses to the local Wastewater Treatment Plant where the wastewater is treated before being discharged into a natural water body.

Storm Drain System

In Harford County, the storm drain systems are not connected to the sanitary sewer system. When it rains, a portion of the rainwater or stormwater flows over the land into the storm drain and discharges directly to our streams, rivers, and ultimately the Chesapeake Bay. Stormwater drainage systems can exist in the form of underground pipes or swales and ditches along the roadside that divert water to streams and rivers. These drainage systems are meant to carry only unpolluted stormwater. As the stormwater travels over land, it encounters and picks up many substances and pollutants that it carries with it downstream. These pollutants may have a significant impact to the water quality of streams, rivers and the Chesapeake Bay. This pollution can cause flooding, clogging, property damage, and endangerment to aquatic life, recreation, and drinking water. Therefore, it's very important that we allow ***"only rain down the drain."***

What is an MS4 Permit?

The Federal Clean Water Act (CWA) specifies stormwater runoff as a point source pollutant that must be regulated. The CWA requires a National Pollution Discharge Elimination System (NPDES) permit for all point source discharge. The specific NPDES permit that states, counties, and towns must abide by is called the Municipal Separate Storm Sewer System, or MS4. Where this permit is applicable, stormwater drainage systems are separate from sanitary sewer systems. Harford County is required to implement an Illicit Discharge Detection and Elimination (IDDE) Program to ensure that all discharges to and from the storm drain system are composed entirely of uncontaminated stormwater. Contaminated discharges must be eliminated. Harford County's IDDE Program is administered by Harford County Department of Public Works, Office of Watershed Protection and Restoration. For more information, visit Harford County's website at <https://www.harfordcountymd.gov/1841/Harford-Streams>.

What is an illicit discharge?

An illicit discharge is the discharge of pollutants into the storm sewer system via overland flow, direct dumping, or illicit connections. Illicit connections are pipes or other direct connections that illegally or unknowingly release pollutants into a storm sewer system or directly into a body of water.

Stormwater Pollutant Examples

✓ Motor Oil	✓ Paint	✓ Pet Waste	✓ Construction Debris
✓ Oil Filters	✓ Solvent	✓ Yard Waste	✓ Transmission Fluid
✓ Antifreeze	✓ Degreaser	✓ Dirt and Gravel	✓ Fertilizer
✓ Pesticides	✓ Detergent	✓ Trash	✓ Cooking Grease

Harford County
Office of Watershed Protection and Restoration
212 South Bond Street
Bel Air, Maryland 21014

**Please report any illicit discharges to Harford County
DPW at 410.638.3400 at any time of day.**

Harford County Stormwater Pollution Prevention

GREASE WASTE MANAGEMENT

Proper grease and food management disposal can play a very important role in reducing the stormwater pollutants entering the storm drain system and polluting waterways. It is important that good housekeeping practices for kitchen grease disposal are used. If not properly disposed of, oil and grease can end up in streams. Waste grease and oil collected in containers requires proper training of employees, good housekeeping practices, and sanitary containment of fats, oils, and greases.

Pollution Prevention Techniques for Solid and Grease Waste Management

- ✓ Recycle oil and grease. Never pour oil or grease into sinks, floor drains, or onto a parking lot or street.
- ✓ Never dump grease down a storm drain. Do not put liquid or grease in trash containers.
- ✓ Designate an area for waste collection away from storm drains and ensure the area is located on a concrete or impervious surface. Design the waste handling area to contain spills and prevent contact with stormwater.
- ✓ Keep the waste collection area clean, dry, and free of debris. Sweep the area regularly. If any leaks or spills are detected, clean with dry practices.
- ✓ If feasible, it is recommended to keep grease bins covered and contained. Store under roof or cover and ensure they have working lids. Ensure lids fit securely, are watertight, and are closed at all times.
- ✓ Have a grease trap or interceptor installed. Keep grease interceptor maintained to prevent sewer overflows or backups and keep records of grease waste hauling.
- ✓ Inspect and clean grease traps and bins regularly and have them regularly serviced and pumped or removed of grease by a licensed hauler. Call collector for service if container capacity is reached.
- ✓ Keep grease storage containers clean and wiped off to prevent accumulation of grime. Spot clean and schedule routine clean ups around oil and grease containers with scraping, dry absorbents, and sweeping. Wipe the outside of grease containers frequently. Never hose down the containers.
- ✓ Post signs to remind employees of good housekeeping practices and proper use.
- ✓ Provide sturdy, lidded containers for oil transport from kitchen to outside receptacles or bring oil and grease containment bins inside. Prevent grease from dripping or overflowing when transferring and emptying containers.

Harford County
Office of Watershed Protection and Restoration
212 South Bond Street
Bel Air, Maryland 21014

Please report any illicit discharges to Harford County DPW at 410.638.3400 at any time of day. For more information, email Danielle Hankins at dhankins@harfordcountymd.gov or call her at 410-638-3217.

Harford County Stormwater Pollution Prevention

VEHICLE FUELING

Spills at vehicle fueling operations have the potential to directly contribute oil, grease, and gasoline to stormwater, and can be a significant source of toxic metals and petroleum hydrocarbons. Delivery of pollutants to the storm drain can be sharply reduced by well-designed fueling areas and improved operational procedures.

Signs for Spill Prevention

Cleaning with Dry Methods

Pollution Prevention Techniques for Vehicle Fueling Operations

- ✓ Maintain an updated spill prevention and response plan on the premises of all fueling facilities and make sure each staff member knows where to find it and how to implement it.
- ✓ Cover fueling stations with a canopy or roof to prevent direct contact with rainfall.
- ✓ Design fueling pads for large mobile equipment to prevent the run-on of stormwater and collect any runoff in a dead-end sump. If the area is asphalt, ensure it is sealed with an impervious sealant. The concrete pad should extend the full length that the hose and nozzle assembly can be pulled plus an additional foot.
- ✓ Retrofit underground storage tanks with spill containment and overfill prevention systems.
- ✓ Clean fuel-dispensing areas with dry cleanup methods. Never wash down areas before dry clean up has been done. Ensure that wash water is collected and disposed of in the sanitary sewer system. Don't allow any discharge of clean up liquids to storm drains.
- ✓ Post signs instructing customers not to over-fill or overtop tanks. This will prevent fuel spills and leaks.

Harford County
Office of Watershed Protection and Restoration
212 South Bond Street
Bel Air, Maryland 21014

Please report any illicit discharges to Harford County DPW at 410.638.3400 at any time of day. For more information, email Danielle Hankins at dhankins@harfordcountymd.gov or call her at 410-638-3217.

Harford County Stormwater Pollution Prevention

VEHICLE FUELING

Spill Kit

Containment Berm

Pollution Prevention Techniques for Vehicle Fueling Operations

- ✓ Keep emergency spill kit cleanup materials on the premises to promptly clean up spills. Ensure staff is educated on proper clean up techniques.
- ✓ Locate storm drain inlets away from the immediate vicinity of the fueling area and direct downspouts draining the roof cover to prevent discharge across the fueling area.
- ✓ Protect above ground fuel tanks using a containment berm with an impervious floor of concrete. The containment berm should have enough capacity to contain 110% of the total tank volume.
- ✓ Fuel dispensing areas should be graded with a slope that prevents ponding and separated from the rest of the site by berms, dikes, or other grade breaks that prevent run-on of urban runoff.
- ✓ Use fuel-dispensing nozzles with automatic shutoffs if allowed.

Harford County
Office of Watershed Protection and Restoration
212 South Bond Street
Bel Air, Maryland 21014

Please report any illicit discharges to Harford County DPW at 410.638.3400 at any time of day. For more information, email Danielle Hankins at dhankins@harfordcountymd.gov or call her at 410-638-3217.

Harford County Stormwater Pollution Prevention

VEHICLE MAINTENANCE & REPAIR

Vehicle maintenance and repair operations can impact water quality by exposing toxins in solvents, waste oil, antifreeze, and other fluids to stormwater. Often, vehicles that are wrecked or awaiting repair can be stormwater hotspots if leaking fluids are exposed. The EPA states, "Used oil from one oil change can contaminate 1 million gallons of fresh water."

Secondary Containment

Used Liquid Collection Under Cover

Pollution Prevention Techniques for Vehicle Maintenance and Repair

- ✓ Collect and store all used antifreeze, oil, grease, oil filters, cleaning solutions, solvents, batteries, hydraulic and transmission fluids for recycling or proper offsite disposal. Ensure waste containers are in good condition.
- ✓ Conduct all vehicle and equipment repairs indoor or under a cover (if done outdoors).
- ✓ Designate a specific location for outdoor maintenance activities to prevent stormwater and groundwater pollution. The area should be paved, away from storm drains, and have stormwater containment measures.
- ✓ Seal service bay concrete floors with an impervious material to allow cleanup without using solvents. Use drip pans and dry absorbent to eliminate the need for wastewater collection and disposal systems.
- ✓ Do not discharge maintenance and service-related fluids and service bay floor washwater into subsurface disposal systems such as septic systems, dry wells, seepage pits and drainage holes or into storm drains or areas where it can seep into groundwater. Do not discharge service-related fluids onsite. This is prohibited.
- ✓ Store cracked batteries in a covered secondary containment area until they can be disposed of properly.
- ✓ Store materials and waste off the ground and away from places where they will be exposed to rainwater

****Hazmat Emergency Number: 410-638-3529****

Harford County Stormwater Pollution Prevention

VEHICLE MAINTENANCE & REPAIR

Drip Pan

Dry Absorbents

Pollution Prevention Techniques for Vehicle Maintenance and Repair

- ✓ Avoid hosing down work areas. Instead, clean with dry methods like shop vacuums. Do not vacuum flammable liquids. Sweep or vacuum work area daily. Keep spill clean-up kits readily accessible at all work areas.
- ✓ Clean all spills immediately using dry cleaning techniques and absorbents such as sand, cat litter, rags, or oil dry. Sweep and properly dispose of dry material. Use drain mats to cover drains in the event of a spill. Immediately report any spills which have entered the storm drain system to Harford County DPW.
- ✓ Inspect the condition of all vehicles and equipment stored outdoors frequently. Capture and clean up any leaks.
- ✓ Use a tarp, ground cloth, or drip pans beneath vehicles or equipment being repaired outdoors to capture all spills.
- ✓ Wash parts in a self-contained solvent sink rather than outdoors.
- ✓ Conduct regular training for staff on good housekeeping practices
- ✓ Perform vehicle painting only in approved enclosed areas with vacuum hoods and filters

Harford County Stormwater Pollution Prevention

OUTDOOR WASHING

Outdoor washing of vehicles, equipment, buildings, roadways, and parking lots can cause stormwater pollution. Wash water may contain chlorine, salts, sediments, phosphorous, metals, soaps, oil and grease, and other pollutants that can degrade water quality. Dirty wash water that is not properly managed can lead to water contamination in streams, rivers, and groundwater.

Outdoor Wash Water Discharge to Storm Drain

Pollution Prevention Techniques for Outdoor Washing and Cleaning

- ✓ Perform all washing operations indoors if possible.
- ✓ Ideally, all vehicles and equipment should be washed at commercial car washes or indoor facilities that are specially designed for washing operations and that recycle, treat, or convey wash water to the sanitary sewer system.
- ✓ If outdoor washing is necessary, contain, control, and capture all outdoor wash water. Utilize oil separators and ensure that wash water is directed toward the sanitary sewer system and that it never discharges into the street, gutter, or storm drain.
- ✓ Use biodegradable, phosphate-free, water-based soaps. Do not use solvents. Avoid using cleaning products that contain hazardous substances such as hydrofluoric acid, sodium hydroxide, bleach, muriatic acid, etc.
- ✓ Minimize water use. Utilize flow-restricted nozzles that automatically turn off when left unattended. Use a spray nozzle or bucket when possible to conserve water and minimize wash water.
- ✓ If pressure washing to clean surfaces such as equipment, parking lots, sidewalks, or buildings, collect the wash water and debris and properly dispose of each in the sanitary sewer system and garbage. Pressure washing and capture can reduce the amount of pollutants that may end up in waterways during a heavy rain event.

Harford County Stormwater Pollution Prevention

OUTDOOR WASHING

Containment System

Wash Water Drainage Prevention

Pollution Prevention Techniques for Outdoor Washing and Cleaning

- ✓ Outdoor vehicle washing requires a permit from MDE. Maryland General Permit No. 21-VW for the Discharge of Exterior Vehicle Wash water to Groundwater from Commercial and Business-Related Vehicle Washing Operations must be obtained prior to outdoor washing. For more information, visit the website below.
<https://mde.maryland.gov/programs/water/wwp/pages/16-vw.aspx>
- ✓ An outdoor washing operation should take place in a designated wash area on a paved impervious surface such as concrete and on wash pad that has a containment system to contain the wash water. The area should be sloped so that wash water is collected and discharged to the sanitary sewer system, holding tank, or dead-end sump pump and away from the storm drain system.
- ✓ Utilize temporary berms, storm drain covers, drain plugs, or other containment systems. Do not discharge wash water into subsurface disposal systems such as septic systems, dry wells or seepage pits.
- ✓ Label storm drains with "No Dumping, Drains to Chesapeake Bay" signs to prevent wash water drainage to inlets.
- ✓ Avoid engine and undercarriage washing which produces high pollutant concentrations. Do this indoors.
- ✓ Train employees on proper techniques to confine washing operations and prevent pollution.

Harford County Stormwater Pollution Prevention

SOLID WASTE MANAGEMENT

Proper waste management and disposal can play a very important role in reducing the amount of litter and pollutants entering the storm drain system and polluting waterways. Dumpsters and solid waste disposal can contribute to water pollution when leakage occurs with emptying, when drain plugs or lids are open, or if the bottom is damaged or rusted.

Uncovered Dumpster

Leaks and Spills

Pollution Prevention Techniques for Solid Waste Management

- ✓ Keep dumpsters under cover or ensure they have working lids. Ensure container lids fit securely, are watertight, and are closed at all times. Open lids allow contact with storm water which dissolves and transports pollutants into the storm water system.
- ✓ Walk the site and inspect dumpsters, trash cans, and trash compactors for leakage. Ensure dumpsters and waste containers are in good condition with no holes or accumulation of grime
- ✓ Trash containers should be leak free. If any leaks are found, take action to prevent and contain further leakage. Call your trash hauler to replace any dumpsters that are damaged or leak.
- ✓ Dispose of all unwanted toxic materials like cleaners, solvents and detergents through a hazardous waste hauler.
- ✓ Minimize storage of scrap metal by disposing of it periodically. Cover any trash stockpiles with impervious cover to prevent release of pollutants.
- ✓ Ensure all garbage is bagged and placed securely inside dumpsters with lids and doors closed. If roll off dumpsters are used for waste material, they should be covered with a tarp.

Harford County Stormwater Pollution Prevention

SOLID WASTE MANAGEMENT

Clean Concrete Dumpster Pad

Covered Dumpsters in Clean Area

Pollution Prevention Techniques for Solid Waste Management

- ✓ Designate an area for trash collection away from storm drains and on a concrete or impervious surface. Design waste handling areas to contain spills and prevent contact with stormwater.
- ✓ Post signs to remind employees of good housekeeping practices and proper use.
- ✓ Keep the trash collection area clean, dry, and free of debris. Sweep the area regularly. Collect trash and litter before it can be washed into the storm drain system. If any leaks or spills are detected, clean with dry practices.
- ✓ Schedule pickups with solid waste contractors frequently and don't allow overflow.
- ✓ Ensure dumpsters are disconnected from storm drain systems by keeping dumpsters and runoff from away from any inlets or storm drain systems.
- ✓ Minimize the amount of liquid disposed in dumpsters. Do not fill with large amounts of liquid waste. Do not hose out a dumpster to clean it unless flow is sure to be captured and directed to a sanitary sewer system.

Harford County Stormwater Pollution Prevention

LOADING & UNLOADING

Materials spilled or leaked during loading and unloading can either be carried away in stormwater runoff or washed off when the area is cleaned. As a result, many different pollutants can be introduced to the storm drain system, including sediment, nutrients, trash, organic material and trace metals. The risk of stormwater pollution is greatest for operations that transfer high volumes of material or liquids or unload potentially hazardous material. Special attention should be paid to the loading and offloading of bulk materials.

Trash and Debris

Open Trench Drain

Pollution Prevention Techniques for Loading and Unloading Areas

- ✓ Avoid loading and unloading materials in the rain.
- ✓ Inspect the integrity of all containers before loading/unloading.
- ✓ Train all employees, especially forklift operators, on good housekeeping practices and post signs.
- ✓ Design liquid storage areas with impervious surfaces and secondary containment.
- ✓ Cover adjacent storm drains during loading and unloading operations to keep debris out.
- ✓ Sweep loading/unloading area surfaces frequently to remove material and debris. Don't wash by hosing the area down. Collect trash and litter before it can be washed into the storm drain system.

LOADING & UNLOADING

Loading Dock Seal

Spill Containment

Pollution Prevention Techniques for Loading and Unloading Areas

- ✓ Cover loading/unloading areas with a canopy or roof if possible and surround the loading/unloading areas with berms or grading to prevent contact with or pooling of stormwater.
- ✓ Place drip pans at locations where leaks or spills may occur and always use pans when making and breaking connections.
- ✓ Position roof downspouts to direct stormwater away from loading/unloading areas and preferably into stormwater best management practices such as bioretention areas.
- ✓ Use seals, overhangs, or door skirts on docks and terminals to prevent contact with rainwater.
- ✓ Ensure that a trained employee is always present to handle and cleanup spills and have an Emergency Spill Cleanup Plan prepared for the facility.
- ✓ Pave the loading/unloading area with concrete rather than asphalt.

Harford County Stormwater Pollution Prevention

PARKING LOTS AND VEHICLE STORAGE

Parking lots and vehicle storage areas can introduce sediment, metals, oil and grease, and trash into stormwater runoff. Simple good housekeeping practices including pavement sweeping, litter control, spill prevention and proper clean up, and stormwater treatment practices can minimize pollutant export from these hotspots. The largest, most heavily used parking lots with vehicles in the poorest conditions have the highest potential for pollution.

Oil Spill

Trash and Debris

Pollution Prevention Techniques for Parking Lots and Vehicle Storage Areas

- ✓ Post signs to control litter and prevent patrons from changing automobile fluids in the parking lot.
- ✓ Do not store wrecked vehicles on lots unless runoff containment and treatment are provided. Place large drip pans under wrecked cars until all fluids are drained; do not allow drip pans to overflow
- ✓ Walk the property monthly to find and fix leaks and to clear any debris from storm drains.
- ✓ Inspect storm drain catch basins twice a year and remove accumulated sediments as needed.
- ✓ Direct runoff water to bioretention areas, vegetated swales, or sand filters (BMPs).
- ✓ Do not allow rooftop gutter drains to discharge to paved surfaces.
- ✓ Monitor parked vehicles and equipment and place drip pans under leaks to collect fluids for proper disposal into labeled sealed containers.

Harford County Stormwater Pollution Prevention

PARKING LOTS AND VEHICLE STORAGE

Emergency Spill Kit

Sweeper Truck

Pollution Prevention Techniques for Parking Lots and Vehicle Storage Areas

- ✓ Vacuum or sweep parking lot monthly.
- ✓ Stabilize unpaved lots.
- ✓ Train employees on spill prevention and good housekeeping practices.
- ✓ Pick up litter, cigarette butts, and packaging waste daily and provide trash receptacles to discourage littering.
- ✓ Stencil or mark storm drain inlets with "No Dumping, Drains to Chesapeake Bay" message.
- ✓ Have an emergency spill kit on hand.
- ✓ Properly clean up any spills by:
 - Using dry methods such as cat litter, sand, rags, or oil dry
 - Using drain mats to cover drains in the event of a spill
 - Promptly and properly dispose of collected fluids into secondary containment vessels
 - **Immediately report any spills which have entered the street, gutter, or storm drain system to Harford County HAZMAT 410-638-3529**

Harford County Stormwater Pollution Prevention

OUTDOOR STORAGE

Protecting outdoor storage areas is a simple and effective pollution prevention practice for many commercial, industrial, municipal and transport related operations. The goal for outdoor storage pollution prevention is to prevent contact between stormwater runoff (rainfall) and outdoor materials in order to prevent runoff contamination. Unprotected outdoor storage areas can generate a wide range of stormwater pollutants, such as sediment, nutrients, toxic materials, and oil and grease.

**Uncovered
Outdoor
Storage**

Pollution Prevention Techniques for Protecting Outdoor Storage Areas

- ✓ If possible, store all materials inside. If this is not feasible, all outside storage areas should be covered with a roof and enclosed to prevent storm water contact. Utilize secondary containment measures.
- ✓ Keep an up-to-date inventory of materials stored outdoors and try to minimize them. Label all waste containers.
- ✓ Train employees on proper material storage and proper techniques for spill containment and cleanup.
- ✓ Cover and contain stockpiles of raw materials to prevent stormwater from running into the covered piles. Covers must be in place at all times when work with the stockpile is not occurring.

OUTDOOR STORAGE

**Covered Secondary
Containment**

**Covered Raw Material
Stockpile**

Pollution Prevention Techniques for Protecting Outdoor Storage Areas

- ✓ Ensure all outdoor storage containers have lids and that they are kept closed. Keep materials and waste off the ground, under roof, and away from places with exposure to precipitation. Consider storing materials on pallets to elevate them. If a roof is not possible, cover the materials securely with an impervious material.
- ✓ Store liquids in covered labeled containers. Barrels and containers with any amount of hazardous material such as oil, chemicals, batteries or paint must be properly labeled, placed in secure containers, and stored in a covered area.
- ✓ Inspect outdoor storage containers regularly to ensure that they are in good condition. Perform inspections by walking the site to look for materials stored outside on a temporary or permanent basis that are exposed to rainfall and amend any issues found.
- ✓ Position roof downspouts to direct stormwater away from loading and unloading areas. Prevent runoff from reaching storm drain inlets. Ensure there are no streak or stain lines on the way to the storm drain. If these are found, resolve the issue.
- ✓ Keep storage areas clean and dry. Minimize trash. Keep lids on trash/recycling cans, bins, and other outdoor containers. Collect all trash, litter, or debris before it can be washed into the storm drain system.
